09/25/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/663,372	Applicant(s) BERINGER ET AL.	
	Examiner Gabrielle McCormick	Art Unit 3629	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 July 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-26,28,30,32 and 34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) 1-26,28,30,32 and 34 is/are rejected.
- 7) ☒ Claim(s) 1 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Status of Claims

1. This action is in reply to the amendment filed on July 28, 2009.
2. Claims 1, 14, 25 and 26 have been amended.
3. Claims 1-26, 28, 30, 32 and 34 are currently pending and have been examined.

Information Disclosure Statement

4. The Information Disclosure Statements filed August 25, 2009 and September 2, 2009 have been considered. Initialed copies of the Form 1449 are enclosed herewith.

Claim Objections

5. Claim 1 is objected to for the following typographical error: "wherein the **the** identity inspector tool provides:"

Previous Claim Rejections - 35 USC § 101

6. Applicant's amendments to claims 1 and 14 are sufficient to overcome the previous rejections. The rejections are withdrawn.

Claim Rejections - 35 USC § 112

7. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
8. Claims 1-26, 28, 30, 32 and 34 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contain subject matter which was not

Art Unit: 3629

described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

9. Applicant has amended the independent claims (1, 14, 25 and 26) to incorporate the following limitation: *sending, by the processor, a notification to the user to indicate that new context information is available for importation into the user profile, wherein the identity inspector tool provides: a first option to the user to accept the new context information and initiate the importation of the new context information; a second option to the user to change the new context information before the importation; and a third option to the user to add additional information to the new context information before the importation.*
10. The specification discloses the following:
11. [0006] ...a method is provided for populating a user profile with context information by transporting context information from other entity profiles to the user profile based on a relationship between the user profile and the entity profile, e.g., a collaborative or business relationship. Context information may also be "inherited", e.g., by importing context data from a parent entity profile into a depending child entity profile.
12. [0030] ...The inherited user-related context metadata may be imported into the more specific entity to populate the appropriate categories and/or create new context clusters (block 540).
13. [0036] The identity inspector 110 is a tool that enables users to watch, edit, monitor their personal profiles. The identity inspector page may include an overview about all context metadata available for that user. The user may use the identity inspector to maintain explicit terms and business activities in the user's context cluster. The identity inspector may also provide filtered views by explicit, implicit, and inherited context metadata.
14. [0037] The user object may be updated on occasion. If new profile elements are found, the user will be notified. The user may then use the identity inspector to decide whether to update the profile as proposed, change it, or add other information. Also, an automatic decay function may be used to delete context metadata relating to unused relationships. There may be slower decay times for attributes that reach a certain level of relevance for a given user.
15. The Examiner asserts that there is no disclosure for linking the activities of the identity inspector tool to importation. The specification does not disclose that the three options are exercised prior, during, or after importation of data. Further, the specification does not disclose that the data is imported, rather, the specification discloses that data is "transported" (see P[0026-0029]). The

Art Unit: 3629

recitations using the “imported” terminology are not in relation to the functions of the identity inspector tool.

Claim Rejections - 35 USC § 103

16. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

17. **Claims 1-4, 8-9, 12-15, 19-22, 25-26, 28, 30, 32 and 34** are rejected under 35 U.S.C. 103(a) as being unpatentable over Howard et al. (US Patent No. 6,697,865 hereafter referred to as “Howard”) in view of Case et al. (US Pub. No. 2003/0154180, hereinafter referred to as “Case”) in view of Cheah (US Pat. No. 7,003,546) in view of Waller et al. (US Pub. No. 2001/0047293, hereinafter referred to as “Waller”).
18. **Claims 1, 8 and 25:** Howard discloses providing portals that simultaneously “present a single coordinated image to selling partners and customers while providing custom experiences for individual users.” (C2; L9-11). Howard discloses “relationship portal software” and “business database” (C2; L35-47: *machine readable instructions*). Howard also discloses an example of context information where a sales person manages the permissions for users, one of which is a lawyer. The sales person can set the lawyer's permissions, but would not have access to the legal content. (C8; L9-13). Thus, the lawyer has access to legal content (and therefore the context information appropriate to a lawyer's permissions). Additionally, Howard discloses:
- *generating a user profile corresponding to a user;* (C4; L35-42)
 - *identifying one or more entities related to the user, said one or more entities having corresponding entity profiles including context information comprising a plurality of types of categorization data;* (C4; L27-35: The company (i.e., entity/parent) profile includes

Art Unit: 3629

- demographic data, lists of affiliated companies, a list of permissions that users can be given, and a list of users who are allowed to manage the profile. These are examples of a plurality of types of categorized data.)
- *associating at least a portion of the context information from the one or more related entity profiles to the user profile by importing at least the portion of the context information into the user profile, wherein the imported portion comprises data belonging to the plurality of types of categorized data;* (C2; L42-48: relationships between parties are regulated to the extent that the relationship involves the portal-providing company's (i.e., an example of a parent company) information: thus, parent company information (i.e., context information) is provided (i.e., imported) to a child company thru the relationship. C2; L8-11: the interaction of the portal providing company and other companies results in presenting a "single coordinated image" while providing custom experiences for individual users, Thus describing the functionality such that context information is imported into a user profile such that the user views the "single coordinated image" while also having a custom experience (i.e., one that results from the user's preferences from the user's profile). C5; L38-50: "Once the permission has been given to a group it is automatically conferred on all members of that group...Any user who becomes a member of a group immediately acquires all the permissions that have been given to the group. The use of groups simplifies administration of permission by enabling a large number of permissions to easily be assigned by putting users in just a few groups." The "permissions" constitute an example of categorized context information from the plurality of types of categorized data listed at C4; L27-35 (The company (i.e., entity/parent) profile includes demographic data, lists of affiliated companies, a list of permissions that users can be given, and a list of users who are allowed to manage the profile. These are examples of a plurality of types of categorized data.) The step of immediately acquiring group permissions by users discloses the importing (i.e., transporting or inheriting) of the context information into the profile of the user. (C4; L35-41: A user profile includes demographic data, permissions and preferences, therefore, the user profile contains

Art Unit: 3629

- a plurality of types of categorized data. C4; L44-46: "the maximum permissions available to a user are limited by the permission assigned to the user's company" thus, the categorized data of permissions is imported and associated with the user's profile.) C7; L67-C8; L4: a selling partner of the portal-providing company can create personalized branded web sites for its customers and can reuse (i.e., import) information available on the portal-providing company's portal.)
- *personalizing a work environment associated with user based on the context information associated with the user profile.* (C2; L56-67: a personal relationship portal that has custom appearances and behaviors for each of the employees). Permissions are provided to modify profiles (C6; L40-50).
19. Howard explicitly discloses that permissions of a user are based on group or company permissions and are therefore imported/inherited from that parent. These permissions impact the accessibility of the user to various types of data. Howard does not explicitly disclose importing at least an additional type of data from an at least type of categorized data because this is accomplished by the permissioning.
20. Case discloses that a user profile is generated based on the job description of the user such that the interests and memberships associated with the user group having a particular job description are assigned to the user. (P[0033]). Roles have profiles that are included in the relevant user's profile. (P[0041-0042]). Case further discloses that all members of a team (i.e., people working on the same project) are assigned an identical profile. (P[0092]). This discloses importing categorized data that belongs to a group membership, an information need of the user, a project of the user and a task on the user.
21. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have included explicitly importing other aspects of a profile to a user's profile, such as a group membership and a project, as disclosed by Case, in the system of Howard for the motivation of conveniently assigning certain interests and memberships of user groups as a function of their job description. (Case; P[0033]). Howard discloses that the user interface presented to a given user

Art Unit: 3629

depends on the user's role and on user and company profiles. (C12; L38-41). Therefore, it is obvious to expand Howard to explicitly define that the permissioning that is imported to a user profile based on a role includes other profile information associated with the role.

22. Note: Though the Examiner has applied art to the category of authorization level, the various categories of data (qualifications, skills, preferences, authorization level, group memberships, informational needs, projects, tasks, taxonomies and accessed content) are **nonfunctional descriptive data** and are not functionally involved in the steps recited. **The importing of categorized data would be performed regardless of descriptions of the categories.** Thus, this descriptive data will not distinguish the claimed invention from the prior art in terms of patentability, see *In re Gulack*, 703 F.2d 1381, 1385, 217 USPQ 401, 404 (Fed. Cir. 1983); *In re Lowry*, 32 F.3d 1579, 32 USPQ2d 1031 (Fed. Cir. 1994).
23. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have included various specified categories of data because such data does not functionally relate to the steps in the method claimed and because the subjective interpretation of the names of the categories does not patentably distinguish the claimed invention.
24. Howard does not disclose *sending, by the processor, a notification to the user to indicate that new context information is available for importation into the user profile, wherein the identity inspector tool provides: a first option to the user to accept the new context information and initiate the importation of the new context information; a second option to the user to change the new context information before the importation; and a third option to the user to add additional information to the new context information before the importation.*
25. Cheah discloses notification to the user that new information is available for importation into the user profile (C19; L19-22 and C25; L52-57). Options are presenter to the user to either accept the request to exchange (C19; L36-38) or to accept the request with limitation (C19; L64-65) where the user enters the limits for the exchange (C20; L2-5). The acceptance with adding limitations is the equivalent of the third option of adding additional information to the new context

Art Unit: 3629

information. Cheah further discloses that importing data from a database "results in substantial time savings" (C33; L46-49).

26. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have included notification and options for importation, as disclosed by Cheah, in the system of Howard for the motivation of providing a user control over additions to profile information. It is obvious to allow a user to control who has access to his contact information, therefore the options of allowing a user to determine to accept or accept with limitations afford that control. Notifications are obvious to ensure timely responses to requests.

27. Cheah does not explicitly disclose a user changing the new context information.

28. Waller discloses changing the format of data prior to importation (P[0166-0168]).

29. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have included changing the new information, as disclosed by Waller, in the system of Cheah for the motivation of ensuring that all data remains in a consistent format. For example, it is obvious to ensure that phone information is stored in a consistent format as this enhances the user's ease of use of the data.

30. **Claims 14, 19 and 26:** Howard discloses providing portals that simultaneously "present a single coordinated image to selling partners and customers while providing custom experiences for individual users." (C2; L9-11). Howard discloses "relationship portal software" and "business database" (C2; L35-47: *machine readable instructions*). The relationship between the company (parent) and the user (*child*) is disclosed by Howard in column 4; lines 27-29: "a profile for a company to which a user belongs must exist before a profile for the user can be created." Howard also discloses an example of context information where a sales person manages the permissions for users, one of which is a lawyer. The sales person can set the lawyer's permissions, but would not have access to the legal content. (C8; L9-13). Thus, the lawyer has access to legal content (and therefore the context information appropriate to a lawyer's permissions). Additionally, Howard discloses:

- *generating a child entity profile corresponding to a child entity; (C4; L35-42)*

Art Unit: 3629

- *identifying a parent entity profile from which the child entity profile depends, the parent entity profile including context information comprising a plurality of types of categorization data;* (C4; L27-35: The company (i.e., entity/parent) profile includes demographic data, lists of affiliated companies, a list of permissions that users can be given, and a list of users who are allowed to manage the profile. These are examples of categorized data.)
- *importing at least a portion of the context information from the parent entity profile into the child entity profile, said imported context information comprising inherited context information belonging to the plurality of types of categorized data;* (C2; L42-48: relationships between parties are regulated to the extent that the relationship involves the portal-providing company's (i.e., an example of a parent company) information: thus, parent company information (i.e., context information) is provided (i.e., imported) to a child company thru the relationship. C2; L8-11: the interaction of the portal providing company and other companies results in presenting a "single coordinated image" while providing custom experiences for individual users, Thus describing the functionality such that context information is imported into a user profile such that the user views the "single coordinated image" while also having a custom experience (i.e., one that results from the user's preferences from the user's profile). C5; L38-50: "Once the permission has been given to a group it is automatically conferred on all members of that group...Any user who becomes a member of a group immediately acquires all the permissions that have been given to the group. The use of groups simplifies administration of permission by enabling a large number of permissions to easily be assigned by putting users in just a few groups." The "permissions" constitute an example of categorized context information from the plurality of types of categorized data listed at C4; L27-35 (The company (i.e., entity/parent) profile includes demographic data, lists of affiliated companies, a list of permissions that users can be given, and a list of users who are allowed to manage the profile. These are examples of a plurality of types of categorized data.) The step of immediately acquiring group permissions by users discloses the importing (i.e., transporting or inheriting) of the context information into the profile of the user. (C4; L35-41:

Art Unit: 3629

A user profile includes demographic data, permissions and preferences, therefore, the user profile contains a plurality of types of categorized data. C4; L44-46: "the maximum permissions available to a user are limited by the permission assigned to the user's company" thus, the categorized data of permissions is imported and associated with the user's profile.) C7; L67-C8; L4: a selling partner of the portal-providing company can create personalized branded web sites for its customers and can reuse (i.e., import) information available on the portal-providing company's portal.)

- *updating the inherited context information in the child entity profile in response to a change in the corresponding at least a portion of the context information in the parent entity profile.* (C4; L49-51: when company permissions are removed, all employee permissions are removed. A specific example of a context based permission that is updated is disclosed in C13; L21-34).

Permissions are provided to modify profiles (C6; L40-50).

31. Howard explicitly discloses that permissions of a user are based on group or company permissions and are therefore imported/inherited from that parent. These permissions impact the accessibility of the user to various types of data. Howard does not explicitly disclose importing at least an additional type of data from an at least type of categorized data because this is accomplished by the permissioning.
32. Case discloses that a user profile is generated based on the job description of the user such that the interests and memberships associated with the user group having a particular job description are assigned to the user. (P[0033]). Roles have profiles that are included in the relevant user's profile. (P[0041-0042]). Case further discloses that all members of a team (i.e., people working on the same project) are assigned an identical profile. (P[0092]). This discloses importing categorized data that belongs to a group membership, an information need of the user, a project of the user and a task on the user.
33. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have included explicitly importing other aspects of a profile to a user's profile, such as a group membership and a project, as disclosed by Case, in the system of Howard for the motivation of

Art Unit: 3629

conveniently assigning certain interests and memberships of user groups as a function of their job description. (Case; P[0033]). Howard discloses that the user interface presented to a given user depends on the user's role and on user and company profiles. (C12; L38-41). Therefore, it is obvious to expand Howard to explicitly define that the permissioning that is imported to a user profile based on a role includes other profile information associated with the role.

34. Note: Though the Examiner has applied art to the category of authorization level, the various categories of data (qualifications, skills, preferences, authorization level, group memberships, informational needs, projects, tasks, taxonomies and accessed content) are **nonfunctional descriptive data** and are not functionally involved in the steps recited. **The importing of categorized data would be performed regardless of descriptions of the categories.** Thus, this descriptive data will not distinguish the claimed invention from the prior art in terms of patentability, see *In re Gulack*, 703 F.2d 1381, 1385, 217 USPQ 401, 404 (Fed. Cir. 1983); *In re Lowry*, 32 F.3d 1579, 32 USPQ2d 1031 (Fed. Cir. 1994).
35. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have included various specified categories of data because such data does not functionally relate to the steps in the method claimed and because the subjective interpretation of the names of the categories does not patentably distinguish the claimed invention.
36. Howard does not disclose *sending, by the processor, a notification to the user to indicate that new context information is available for importation into the user profile, wherein the identity inspector tool provides: a first option to the user to accept the new context information and initiate the importation of the new context information; a second option to the user to change the new context information before the importation; and a third option to the user to add additional information to the new context information before the importation.*
37. Cheah discloses notification to the user that new information is available for importation into the user profile (C19; L19-22 and C25; L52-57). Options are presenter to the user to either accept the request to exchange (C19; L36-38) or to accept the request with limitation (C19; L64-65) where the user enters the limits for the exchange (C20; L2-5). The acceptance with adding

Art Unit: 3629

limitations is the equivalent of the third option of adding additional information to the new context information. Cheah further discloses that importing data from a database "results in substantial time savings" (C33; L46-49).

38. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have included notification and options for importation, as disclosed by Cheah, in the system of Howard for the motivation of providing a user control over additions to profile information. It is obvious to allow a user to control who has access to his contact information, therefore the options of allowing a user to determine to accept or accept with limitations afford that control. Notifications are obvious to ensure timely responses to requests.

39. Cheah does not explicitly disclose a user changing the new context information.

40. Waller discloses changing the format of data prior to importation (P[0166-0168]).

41. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have included changing the new information, as disclosed by Waller, in the system of Cheah for the motivation of ensuring that all data remains in a consistent format. For example, it is obvious to ensure that phone information is stored in a consistent format as this enhances the user's ease of use of the data.

42. **Claims 2 and 20:** Howard discloses explicitly associating context information relating to the user/child entity with the user/child entity profile. (C11; L9-11: the user profile includes preferences and C11; L37-41: the user purposely modifies the user preferences).

43. **Claims 3 and 21:** Howard discloses a configuration function that identifies and creates profiles for companies and employees. The configuration information is kept in a "portal management database 23". (C3; L11-19). Data is gathered from the database by a Java class library. (C3; L48-58). A *context cluster* is understood to be a compilation of data, such as found in database tables, therefore the functionality of the Java class library in gathering data is equivalent to creating a *context cluster*.

44. **Claim 4:** Howard discloses *transporting one or more context clusters into the user profile*. (C4; L45-51: the permissions of a user are limited to the permissions assigned to a company).

Art Unit: 3629

45. **Claims 9 and 22:** Howard discloses changing a company profile or modifying a user profile. (C6; L44-47 and C8; L20-37: a change in the company permissions leads to changing (i.e., updating) user permissions).
46. **Claims 12 and 13:** Howard discloses collaborative and business relationships. (C13; L21-34).
47. **Claim 15:** Howard discloses *personalizing a work environment associated with user based on the context information associated with the user profile*. (C2; L56-67: a personal relationship portal that has custom appearances and behaviors for each of the employees).
48. **Claims 28, 30, 32 and 34:** Howard discloses an employer-employee relationship (C4; L52-55). Such a relationship is construed to be based on the activities, workset and collaboration of the user with the entity.
49. **Claims 5-7, 10-11, 16-18 and 23-24** are rejected under 35 U.S.C. 103(a) as being unpatentable over Howard et al. (US Patent No. 6,697,865 hereafter referred to as "Howard") in view of Case et al. (US Pub. No. 2003/0154180, hereinafter referred to as "Case") in view of Cheah (US Pat. No. 7,003,546) in view of Waller et al. (US Pub. No. 2001/0047293, hereinafter referred to as "Waller") in view of Hosea et al. (US Pub. No. 2002/0138331 hereafter referred to as "Hosea").
50. **Claims 5, 6, 7, 16, 17 and 18:** Howard/Case discloses the limitations of claims 1 and 14. Howard does not disclose *links to services and information places*.
51. Hosea, however, discloses a system for personalizing Web pages to meet the interests of Web users based on user profiles. (Abstract). Hosea discloses links to "Yahoo! Shopping" (i.e., a service) and "News & Media" (information places) in Figure 11.
52. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have included links to services and information, as disclosed by Hosea in the system disclosed by Howard, for the motivation of providing a method of allowing the user to "more quickly and easily locate material that is most likely to be of interest" (Hosea; P[0050]).

Art Unit: 3629

53. **Claims 10, 11, 23 and 24:** Howard/Case discloses the limitations of claims 9 and 22. Howard does not disclose determining relevance of context information and removing based on the relevance.
54. Hosea, however, discloses determining the relevance of content to the user based on an affinity rating (P[0047]). The affinity rating is generated by analyzing the user's Web surfing and click-stream data (P[0042]). Content deemed not to be of interest to the user is eliminated (P[0050]).
55. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have included eliminating content based on relevance to the user, as disclosed by Hosea, in the system of Howard for the motivation of reducing "what may be perceived by a user as clutter" and simplifying the presentation of the information such that the user can "more quickly and easily locate material that is most likely to be of interest" (Hosea; P[0050]).

Response to Arguments

56. Applicant's arguments with respect to claims 1, 14, 25 and 26 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3629

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gabrielle McCormick whose telephone number is (571)270-1828. The examiner can normally be reached on Monday - Thursday (5:30 - 4:00 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Weiss can be reached on 571-272-6812. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
